Red Tape Holds Up New Bridge

On September 13th, 2003, hundreds gathered to take in the spectacular sight of the one-of-a-kind red bridge.

This was no ordinary bridge. With the help of today's technology, the constructors were able to keep this bridge stable with none other than red tape. It looks like tape really can fix anything!

The building of this phenomenon began nearly a year prior to completion. With hard working architects paired up with the brains of the world's top chemists and physicists, they were unstoppable.

This not only changes the way we look at the simple things in our lives, but it also opens up a

The Red Bridge is the only one of its kind, one that will change the way we all look at the simple things in our lives.

whole new world of possibilities because of our new outlook. We now imagine what the simplest things in our world can be capable of, such as that piece of seemingly useless paper. Our imaginations run wild with these possibilities!

The sky is the limit.
